

# A short value target is not the only possible bottleneck

Illustrative pre-existing roots 40, 35 and 37; position 8; median of 10 conditional continuations per root/arm.

The current online network substitutes for the unavailable historical lagged target network. These are not original learner targets.

At the obstacle root, the 10-step proxy already demands a correction (18 → 131). This does not identify why training missed it.
